CISRETAIL LITE

No Matter which Retail Business you're in, CIS-Retail-Lite helps you make it BETTER!

Introduction

Point of sale (POS) software is software that retailers use to calculate sales and operate the cash drawer; it is the computerized cash register. Point of sale software adds up the sales total, calculates the change back from the amount tendered, and automatically adjusts the store's inventory levels to debit the amount of inventory sold.

Point of sale handles sales, manage your inventory database, run a barcode scanner and allow you the capability of querying your inventory and sales database in a flexible way.

In any business today, integration is an important fact. The ability to combine all of your procedures so that they seem to be one complete seamless operation is the highest form of efficiency. This is possible with point-of-sale software and technology, by networking every process of your business to the main access terminal.

Integrated Accounts & Inventory

The powerful integration feature will prevent you from entering data manually from your billing system to your accounting system.

Hold Bill

A Hold Bill option is available in case another customer shows up during a Bill Transaction. Instead of cancelling the bill of the previous customer & going through it all over again, the cashier can Hold the Bill for later use.

Prevention of Bill Loss

In case of Power Failure or any similar reason which can cause the software to shut down, the current bill in progress would be put on hold, so that when again the software is started, the Bill is not lost.

Perform Physical Stock

Perform Physical Stock and then get it verified from the manager to check whether the actualy stock matches the stock available at warehouse.

Alternate Unit Option

Through this option, Alternate Units can be defined for item which are normally sold in Packets or Dozen or other custom alternate units.

Purchase / Purchase Return

Both Purchase and Purchase Return can be tracked with CIS Retail Lite. Purchase Return Vouchers can be created with respect to the Purchase done against a specific Supplier.

Several forms of payment

Multiple forms of payment are available including credit card, cash or party credit.

Multiple Reports

Different Reports can be generated at the end of each month to keep a view on the Top 10 Products, Profit /Loss, Daily Sales, Sales Summary Date Wise and other such information to know the of current standing of the company.

Custom Attributes

Through this option, you can choose your own custom attributes. These can be the key predefined attributes on which your information is based.

Security Level

Cashier are only allowed the access assigned to their password whereas the Manger is given full rights and his override can be required to allow price changes or avail discounts.
